

SEA CLEAR ELECTROLYSIS SALT

Manual

Add the salt directly to the pool while the pool filter is working. **Do not start the system if the salt has not dissolved completely in the water.**

Initial dosage: 4 grams per liter (400 kg per 100 m³ of water).

The pH of the pool water should be between 6.9 and 7.4.

The salinity should be 4g/L.

The water temperature must be above 15 °C.

Filtration times and settings should be such as to ensure the electrolysis rate between 0.5 and 1 ppm of water.
